

FREE DELIVERY IN THE PORTLAND METRO AREA

Our company was founded with a firm commitment toward helping improve our local water quality. It is the responsibility of everyone to help in this effort. Reclaiming and reprocessing antifreeze can help achieve this goal.

- Laboratory tested and approved
- We use state-of-the art, recycling technology. Glytek is the only company in this area using this quality technique.
- Our antifreeze products are manufactured locally, in small batches, thereby saving transportation and storage costs.
- We produce only high quality antifreeze, using the same corrosion inhibitor package as the major brands.
- All antifreeze is sold pre-diluted and ready to use with freeze point of -34° . Low silicate. All weather protection.
- Our products surpass federal and industry standards.

GLYCOOL 50/50

Our Signature Product is a ready to use, low silicate, low phosphate coolant. Glycool 50/50 was designed for the Pacific Northwest weather, and is compatible with conventional and aluminum engines. Manufactured from recycled antifreeze. Pre-diluted with a freeze point of -34°

\$2.15/gal. Under 55 gallons.
\$2.00/gal. 55 to 100 gallons.
\$1.85/gal. Over 100 gallons.

USED ANTIFREEZE HAUL-OFF

We strongly encourage our customers to save used antifreeze for recycling. Coolants collected from our customers are essential to our business. We offer **Free Waste Antifreeze Hauling** to all customers providing the glycol content of their waste meets our standards. All waste antifreeze is tested for glycol content before removal. Fees charged will vary depending upon freeze point.

-10° or below	FREE
-10 to -5	.50cents/gal
-5 to 0	.75cents/gal
0 or above	\$1.00/gal
Oil contaminated waste hauling fees vary.	

ON-SITE RECYCLING

The Glytek on-site recycling program uses waste antifreeze you collect. This service is tailored to the customer concerned with liability issues associated with "cradle to grave law". Both state and federal laws mandate that producers of potentially hazardous waste are responsible for the end disposal of their waste forever. Recycling on-site eliminates the potential liability.

On-site customers receive the same high quality end product, but the processing is done at the customers facility.

\$2.50 / gallon
30 gallon minimum

On-site reprocessed products may require additional antifreeze to lower the freeze protection. Costs associated with additional antifreeze will vary according to wholesale price and availability.
