

About E.C.S.

Environmental Cleaning Systems Inc. is a leading North American manufacturer specializing in patented, portable containment products and methodologies for the mobile contract cleaning and de-icing industry.

The parent company, *Rexdale Mobile Truck Wash Inc.*, utilizes Latimat® containment products and methodologies in their environmentally friendly cleaning business. With over 25 employees, it is a well established company serving Ontario since 1966.

Environmental Cleaning System Inc. serves clients through the U.S.A., Canada and abroad. Various types of wastewater and wastes are generated by washing of vehicles and equipment. Without the proper facilities to contain and treat wastewaters, fleet operators commonly wash vehicles outdoors on pavement or on the ground. In these cases, wastewaters and contaminants enter soils and ground water or are directly discharged to the storm sewer, entering a creek or body of water. Federal, Provincial and State environmental authorities are placing more scrutiny on washing operations. These can be serious violations of the *Clean Water Act* and other environmental laws.

E.C.S. offers a full line of environmental containment and recovery products, including the Latimat® Containment Pad.

E.C.S. products are currently in use throughout the world. We are developing and expanding domestic and international market potential, as this is the key to opening new doors throughout the world to automotive transportation, airline, railroad, marine, oil, mining, lumber and utility industries including (but not limited to) environmentally sensitive areas where contaminants such as P.C.B's must be contained for disposal or at nuclear clean-up sites, and for the collection of glycols from the de-icing of aircraft.
