

Karcher Model ASA 600 SS

Shown with optional automatic advancing belt filter

Automatic belt filter and sludge collector are options.

The belt filter increases efficiencies and reduces cleaning time, creating an automated waste recovery system

The ASA 600 SS is a complete automatic processor for wash water. This system is simple to operate and maintain plus has a low operating cost. Most dissolved solids can be removed and encapsulated into a non-leachable sludge. Water based ink and paint, most heavy metals, dirt, emulsified oil and grease are removed leaving very clear water for reuse or discharge to sewer.

Technical Data

Water volume GPM	2.6
Dimensions / LxWxH (in)	77x25x51
Weight / lbs.	484
Electrical Data V/PH	110/1

Accessories

Automatic advancing belt filter
Six sock filter/oily water separator
Processed water holding tanks
Pressurization system
